I have recently purchased a MADI Edge card for a ULN2 3d Unit
Is the maximum channel count limited to 128 channels?
The Card has 4 x BNC In and 4 x BNC Out

I have an upcoming project that needs to record 3 x MADI streams at 48khz

Is this possible?

The MHLINK driver maxes out at 128 channels, so that is the most you can record over MHLINK at the current time.
