Hi there!

I have a LIO8 and ULN8 running over MHLINK (everything up to date), and connected one interface with USB for MIDI. This worked some days ago, but suddenly stopped. No MIDI coming in in Logic (or Pro Tools...). MIDI OUT is working correctly. Then connected the second unit over USB to use this for MIDI. Worked. But after a while, stopped. Now both units have no MIDI in. MIDI out works fine. Switching off / restarting the units / Mac didn't succeed. MIDI in is still dead. MIDI IN / OUTS are recognized from the DAWs... Also tried only with one unit connected over USB only... no success. anyone else who has this problem? thanks
