Hi,

I am testing a LIO-8 interface one of my colleagues borrowed to me and i am slowly but steadily getting acquainted with the device and its software.
So far I am very excited and planning on purchasing a metric halo interface myself.

There is one question in particular: as I have been working with RME using an ARC USB remote as a physical monitor controller, is there any way to map it or any comparable device to MIOConsole's monitor controller? I tried to find an answer myself on metric halo's homepage and the manual but might have glossed over it.

Kind regards,
Walch Maximilian

afaik there is no hardware remote controller. I use an Elgato Stream Deck with the keystrokes that come with MIOConsole3d. It's not reliable and often doesn't work. It's bad not to have a decent hardware remote for such a nice interface.

ok - i will look into it a little more. when opening the control surface settings i can choose the ARC USB at least.
maybe i can get it to work via MCP.

Well I should say you can use Mackie Control or EuControl enabled controllers for this. However there is no device that I know that really has a monitor section that gives you enough knob per function to fully rely on it.

that's a bummer - maybe i'll be able to program sth
i'll post again as soon as i've figured something out

What I found out today using Bome MIDI Translator Pro are some MIDI Notes you can program to use with the mixer. I'm still not allowed to post any url here (I have a google sheet for that) so I give a short version here. Channel 1 Note 0-7 for Record Enable Channel 1-7, 8-15 for Solo, 16-23 for Mute, 24-31 for Select, 32-39 for Phase Invert, 40/41 Bank Left/Right, 42/43 Nudge Left/Right, 54-61 Monitor Source 1-8, 62-69 Monitor Destination 1-8, Note 74 Mono, Note 77 Mute, Note 78 Dim.
Maybe guys at Metric Halo could provide a full sheet?
