Hi everyone,

Did somebody try to use the X-Key 12 to control the monitoring section?

it does not look very appealing but as far as i could find out it should do the job and work with OSX.

i'am new to the MH world, until now i used the RAM5000 System from Heritage Audio as controller for my 2.0 and a 6.0 setup. I don't see a reason to have this controller in my signal chain anymore if i can find a nice remote for the MIOConsole.

I need to switch between 2.0 and 6.0, beside that i would like to mute every speaker on its own.

Any feedback and hardware suggestions much appreciated.

Thanks,
Georg

You could use keyboard shorts cuts for that. I use my F keys.

I also still use an external controller and would love to have an external box (like a StreamDeck) to use Talkback Volume etc. but bidirectional. So I can get feedback from the MIO controller. Wrote to MH several times as a feature request over the last years, but no luck yet. Maybe you could join and write a feature request...
