Hello!

How do I isolate an Input in the MIOConsole Mixer?

Cheers!

Sorry, I am not sure what you are asking for.

Are you trying to make a channel solo safe?

Or are you trying to have a solo that doesn't disrupt the mix?

Or something else?

Sorry - which one? There are three options listed, and I am still not sure what you are asking about. The answer is different for the different options.

Ok - there is no solo safe currently implemented. You can set the solo to be PFL or AFL rather than Solo in place so that it will not disturb the actual mix, but we don't have solo safe available in the mixer yet.

Please feel free to file a feature request from the Help menu.

Thank you for your answer. That's very disappointing.
